About Me

Computer Science Engineer (UC3M), currently in AXA's Graduate Tech program in Madrid, a full-time rotational scheme working on AI and data projects across technical departments. My academic journey includes an exchange year at San Francisco State University, taking master's-level courses co-taught by professionals from OpenAI, IBM and other Bay Area companies. My Bachelor's thesis received the maximum grade and was nominated for honours distinction. I seek to develop high-impact solutions at the intersection of technology, business and product.

Personal Projects

I use my free time to explore AI and agentic coding tools, taking ideas into working products and testing them through hackathons and independent builds.

HackSpain – Winning Emergency-Response Simulation 2026

- Built the HappyRobot integration in our winning emergency-response simulation at HackSpain, a 36-hour hackathon with startup-led challenges. Demo: hackspain.g-villar.tech.

Sol Sombra – Shade-Aware Route Planner for Madrid 2026

- Built and shipped a live product that scores sun and shade street by street and routes pedestrians through Madrid according to their preference. Live: solsombra.madrid.
- Built the TypeScript REST API and Next.js frontend, combining OpenStreetMap, Catastro, Madrid City Council and Open-Meteo data in one routing system.

Experience

AXA Tech Graduate Program

September 2025 – Present

Full-time rotational programme across technical and business teams at a global insurer.

- **Testing:** implemented self-healing testing paradigms using DOM-based automation and AI to fix broken test flows.
- **Innovation:** built an HR AI agent now in production, and Project WarRoom, which uses AI and document management to automate the business side of software workflows across the company.

Freelance Software Engineer, Outlier AI

September 2024 – November 2025

- Worked with domain experts and LLM provider teams to translate subject-matter expertise into Python data-pipeline requirements.
- Evaluated LLM-generated code and contributed to RLHF projects through structured review, testing and iteration.

Technical Skills

AI/ML: RAG, agents, LLM evaluation, RLHF, retrieval pipelines, prompt testing, model failure analysis.

Engineering: Python, TypeScript, Java, REST APIs, PostgreSQL, Selenium, Playwright, Git.

Education

BSc in Computer Science Engineering, Universidad Carlos III de Madrid

2021 – 2025

- Graduated in the top 10% of the cohort.
- Bachelor's thesis on applying AI to research, awarded the maximum grade and nominated for honours distinction.

Exchange Year, San Francisco State University

August 2023 – June 2024

- Passed a qualifying exam to take master's-level courses as an undergraduate, co-taught by Bay Area professionals from IBM and OpenAI. Began the AI project that turned into my bachelor's thesis.

Recognition & Languages

- Multiple hackathon winner: HackSpain (2026), Qubic & Vottun Madrid Hackathon (2025), and II Circular Innovation Hackathon (Mallorca).
- Languages: Spanish (native), English C2 (Cambridge; IELTS 8/9).
