## About Me

Computer Science Engineer (UC3M) in AXA's Graduate Tech program with experience across applied AI, data pipelines, automation, and software quality. I have built backend APIs, integrated external data sources, and shipped end-to-end projects from ambiguous requirements to working products. I enjoy learning unfamiliar domains quickly, staying up to date with state-of-the-art agentic AI engineering best practices, models, and techniques, adapting them to regulatory environments.

## Work Experience

### Graduate Tech Program, AXA

September 2025 – Current

- Full-time rotational program across technical and business teams at a global insurer, translating business requirements into AI, data, automation, and software quality initiatives.
- AI Automation (Testing): Built Java and Selenium browser automation and AI-driven exploratory testing workflows, reviewing outputs and failure modes to improve software quality.
- AI Solution Exploration (Innovation): Implemented an end-to-end HR agent and explored emerging AI technologies and their potential applications for company innovation strategy.

### Freelance Software Engineer, OutlierAI

September 2024 – November 2025

- Designed and maintained Python-based data pipelines connecting subject-matter experts with LLM providers including OpenAI and Google.
- Onboarded multiple RLHF projects and improved model accuracy in more than 90% of the models worked on through structured evaluation and iteration.
- Validated LLM use cases where Python tools provided deterministic capabilities, balancing automation with human review.

## Personal Projects

### Sol Sombra — Shade-Aware Route Planner for Madrid

2026

- Owned a TypeScript backend and REST API consumed by a Next.js frontend, turning an ambiguous local need into a working shade-aware route product for Madrid.
- Researched and integrated Open-Meteo, Madrid City Council, and Catastro systems involving messy datasets, adding PostgreSQL persistence for application and user-feedback data.

## Education

### BSc in Computer Science Engineering, Universidad Carlos III de Madrid

2021 – 2025

- Amongst the top 10 best universities in Europe according to QS Shanghai Ranking, most demanded by Computer Science students in Spain.
- Bachelor's thesis on leveraging AI in research, graded with maximum honors.
- Relevant coursework: Software Engineering, Interaction Design, Cybersecurity Engineering, Computer Networks, and Deep Learning.

### Exchange Year, San Francisco State University

August 2023 – June 2024

- Immersed in Silicon Valley's tech ecosystem, taking master-level courses taught by professionals from OpenAI, Intel, IBM, and VMware.
- Initiated AI explainability research project that continued as further research upon return to UC3M.

## Awards & Recognition

- Multiple Honors in AI Explainability and Ethics, Interactive and Ubiquitous Systems, Human-Computer Interaction, Computer Networks, Deep Learning.
- Winner of II Circular Innovation Hackathon (Mallorca) and Telefónica's Web3 Hackathon (largest in Spain).
- Santander Bank Erasmus+ Scholarship (2023) awarded for outstanding GPA and undertaking an Erasmus+ program.
- Only student to obtain C2 grade in Cambridge Advanced English test in Comunidad de Madrid's extraordinary under-16 public round.

## Languages & Additional Training

**Languages:** Spanish (native), English C2 (Cambridge Assessment, 8/9 IELTS), French (basic).

**Courses:** Amazon DeepRacer AI and ML (2024), ICAI Videogame Development Course.
